

Darvish Yadav Dega

Hyderabad, India

+91 8125637200 | darvishyadav6655@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Computer Science undergraduate with a strong backend focus, experienced in building full-stack systems that solve real problems, from secure enterprise authentication platforms to AI-integrated document intelligence. Comfortable working across the Technical stack, with a deeper grip on API design and scalable backend architecture.

Skills

- Languages & Frameworks:** Java, Python, JavaScript, React.js, Node.js, Express.js, CSS, HTML
- AI & Databases:** LangChain, LangGraph, RAG Pipelines, FAISS, MongoDB, MySQL
- Tools & Technologies:** REST APIs, JWT Authentication, RBAC, Git, Postman

Core Coursework

Data Structures and Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming (Java), Computer Networks

Projects

JWT-RBAC User Management System | JWT, MySQL, Node.js, Express.js, React.js Nov 2025 – Feb 2026

- Architected a production-grade User Management System with RBAC model, also integrated JWT stateless auth and forced credential rotation over a normalized MySQL schema, covering the full employee onboarding-to-offboarding lifecycle.
- Backed by a clean MVC service-layer with audit logs and brute-force protection, paired with a React frontend where each access tier sees only its permitted interface surface.

LLM-Driven Document Intelligence | Python, LangChain, Groq LLM, FAISS Mar 2026 – Present

- Built an end-to-end RAG pipeline for PDF Q&A: chunked PDFs into 1000-character segments with 100-character overlap using PyPDFLoader and RecursiveCharacterTextSplitter, embedded into 384-dim vectors via all-MiniLM-L6-v2, and indexed in FAISS for top-k similarity/MMR retrieval.
- Generated answers strictly from retrieved context using Groq's llama-3.3-70b-versatile (temperature 0.2) via LangChain, grounding every response to its source filename and page number to eliminate hallucinations.
- Structured as modular components (ingest, retrieve, generate) with clean interfaces, tied together by an interactive CLI supporting real-time querying and source citation.

NourishNet | REST APIs, MongoDB, React.js, Node.js, Express.js Dec 2024 – Mar 2025

- Full-stack food redistribution platform connecting restaurants and venues with NGOs via structured donation listings, real-time claim workflows, and geolocation tagging over a Node.js/Express REST API with a MongoDB backend.
- Reduced coordination overhead to a structured 3-step claim workflow through role-specific dashboards for donors and NGOs, with donation scheduling, status tracking, and claim history built in.

Education

Gokaraju Rangaraju Institute of Engineering and Technology Sep 2023 – Jul 2027

B.Tech in Computer Science Engineering, CGPA: 8.09

Deeksha Junior College Aug 2021 – May 2023

Class XII, MPC, Percentage: 90%

Vikas – The Concept School Jun 2017 – May 2021

Class X, Percentage: 79%

Position Of Responsibility

Computer Society of India (CSI) – GRIET Chapter Hyderabad, India

Event Committee Lead | formerly Admin Sep 2025 – Present

- Spearheaded end-to-end execution of 4+ technical events and hackathons as Event Committee Lead, coordinating 200+ student participants across planning, logistics, and on-ground operations while serving as the central communication hub across sub-teams, delivering every event on schedule with zero major escalations.

Certifications & Achievements

- Cisco** — Introduction to Cybersecurity Nov 2023
- Eduskills** — AI/ML Virtual Internship Sep 2025
- Smart Interviews** — Smart Coder Global Rank **8476 / 56602**
- Top 10 Finalist** — Techxcelerate Hackathon (BITS Hyderabad) & VHack Hackathon (Vignan Institute)
