Summary

Computer Science undergraduate specializing in backend engineering and AI-integrated systems, from enterprise-grade RBAC authentication platforms to production-grade RAG pipelines. Deep understanding on API design, scalable backend architecture, and retrieval-augmented LLM systems.

Education

Gokaraju Rangaraju Institute of Engineering and Technology

B.Tech in Computer Science Engineering, CGPA: 8.09

Sep 2023 – Jul 2027

Hyderabad, India

Deeksha Junior College

Class XII, MPC, Percentage: 90%

Aug 2021 – May 2023

Hyderabad, India

Vikas – The Concept School

Class X, Percentage: 79%

Jun 2017 – May 2021

Hyderabad, India

Core Coursework

Object-Oriented Programming (Java), Data Structures and Algorithms, Operating Systems, Database Management Systems, Machine Learning

Technical Skills

- Languages & Frameworks:** C++, Java, Python, JavaScript, React.js, Node.js, Express.js, CSS, HTML
- AI & Databases:** LangChain, RAG Pipelines, FAISS, ChromaDB, MongoDB, MySQL
- Tools & Technologies:** REST APIs, JWT Authentication, RBAC, Git, Postman, Prompt Engineering

Projects

Production-Grade Document Q&A System with Hybrid RAG Architecture

Mar 2026 – Present

- Architected an end-to-end RAG pipeline with hybrid retrieval (FAISS dense + BM25 sparse, fused via reciprocal rank fusion) and MMR-based re-ranking to maximize retrieval precision and recall over PDF corpora.
- Built robust ingestion (PyPDFLoader + RecursiveCharacterTextSplitter, OCR fallback for scanned docs) and generated grounded, hallucination-free answers via Groq's llama-3.3-70b-versatile with strict source/page-level citation.
- Implemented multi-turn conversational memory and token-streaming via LangChain for low-latency, context-aware querying through an interactive CLI.
- Instrumented the pipeline with LangSmith for tracing, latency monitoring, and groundedness evaluation across a modular ingest → retrieve → rerank → generate architecture.
- Tech Stack:** Python, LangChain, LangSmith, Groq, FAISS, BM25, HuggingFace Embeddings, Tesseract OCR

JWT-RBAC User Management System

Nov 2025 – Feb 2026

- Architected a production-grade User Management System with RBAC model, also integrated JWT stateless auth and forced credential rotation over a normalized MySQL schema, covering the full employee onboarding-to-offboarding lifecycle.
- Backed by a clean MVC service-layer with audit logs and brute-force protection, paired with a React frontend where each access tier sees only its permitted interface surface.
- Tech Stack:** JWT, MySQL, Node.js, Express.js, React.js

NourishNet

Dec 2024 – Mar 2025

- Food redistribution platform connecting restaurants and venues with NGOs via structured donation listings, real-time workflows, and geolocation tagging over a Node.js/Express REST API with a MongoDB backend.
- Reduced coordination overhead to a structured 3-step claim workflow through role-specific dashboards for donors and NGOs, with donation scheduling, status tracking, and claim history built in.
- Tech Stack:** REST APIs, MongoDB, React.js, Node.js, Express.js

Position Of Responsibility

Computer Society of India (CSI) – GRIET Chapter

Hyderabad, India

Event Committee Lead | formerly Admin

Sep 2025 – Present

- Spearheaded end-to-end execution of 4+ technical events and hackathons as Event Committee Lead, coordinating 200+ student participants across planning, logistics, and on-ground operations while serving as the central communication hub across sub-teams, delivering every event on schedule with zero major escalations.

Certifications & Achievements

- Cisco** — Introduction to Cybersecurity Nov 2023
- Eduskills** — AI Virtual Internship Sep 2025
- Smart Interviews** — Smart Coder Global Rank **8476 / 56602**
- Top 10 Finalist** — Techxcelerate Hackathon (BITS Hyderabad) & VHack Hackathon (Vignan Institute)
